

Discover our next-AI gen Galaxy modules

Enrich your SafetyEasy® multivigilance platform with enhanced efficiency & compliance

Reduce manual processes and enhance efficiency, compliance and signal detection with our next-AI gen Galaxy modules, available as add-ons to our industry-leading SafetyEasy® multivigilance suite.

Our AB Cube Galaxy spans next-generation business intelligence tools - from AI-powered modules for ICSR intake to dynamic BI dashboards. Our connectivity and automation platform delivers an open, integrated system for fast, efficient and scalable compliance.

Regardless of AE format, our Galaxy modules offer a complete panel of solutions to automatically process cases - **saving up to 70% time** on manual case intake and performing case generation and AE filtering with **99.99% accuracy**.

SafetyEasy® Suite: an agile, flexible & compliant system

- ✓ Simplify & speed up case intake
- ✓ Gain case creation efficiency
- ✓ Enhance case analytics
- ✓ Improve signal detection
- ✓ Automate ICSR processing
- ✓ Seamless system connectivity
- ✓ Boost compliance

Empower your safety team

Gain greater efficiency

Achieve more with limited resources

Meet regulatory guidelines

Compliant & audit-ready

GALAXY MODULES: OVERVIEW

Introducing our next-AI generation Galaxy modules. Simplify and speed up case intake and export to health agencies. Harness AI-powered assistance to automate case creation from non-standard text. Seamlessly integrate with any external system and connect safety data. Enhance compliance and improve signal detection. Discover the power of AB Cube Galaxy.

CasEasy AI - speed up case intake

CasEasy AI assistant applies Natural Language Processing (NLP) technology, allowing you to copy and paste the verbatim of your ICSR - or import it from a file - and automatically convert it into a case in SafetyEasy®. The coding suggests AEs (automatically MedDRA-coded) and identifies potentially serious cases.

- Gain efficiency in case creation from non-standard texts
- Import pdf/jpeg/png + handwritten/unstructured docs
- Automatic flagging of potentially serious cases

01

Converter - auto-extract data

To save your team valuable time when entering cases in the system, our SafetyEasy® Converter tool incorporates Optical Character Recognition (OCR), allowing case information to be automatically AI-generated from uploaded forms such as CIOMS, Medwatch or SAE.

- Reduce case intake by 70%
- Analyses forms to extract all required data and enters datapoints directly into cases in SafetyEasy®

02

Literature Manager - optimize screening

To optimize surveillance, Literature Manager saves articles screening time. This end-to-end tool - automatically connected to PubMed and Embase - helps you find, analyse, review & create potential cases.

- Unlimited number of products monitored included
- Triage using advanced AI sorts only potential PV cases, reducing screening volumes
- Abstract processed through CasEasy AI, creating the case in SafetyEasy®

03

GALAXY MODULES: OVERVIEW

iTAP® - audited processing & filtering of ICSR batches

ICSR Triage Assessment and Processing enables you to import large batches of PV cases (for eg. Eudravigilance MLM or L2A cases, or cases sent by partners) into a buffer zone, and apply filters to seamlessly import only relevant cases into SafetyEasy®.

- Management of XMLs E2B(R2) and (R3) formats
- Viewing and filtering capabilities on all cases' fields
- Full audit trail of activities & import/rejection decisions
- For CROs, possibility to use iTAP for triage activities across several client organizations

04

MedInfo - linked to your AEs

Track your patient and health professional questions. Immediately push vigilance-related questions to your SafetyEasy® safety database. MedInfo can be used as a standalone or integrated to SafetyEasy®.

05

Intake - easily track imported cases

Import your cases in any format. Intake is a buffer zone where the cases can “transit” for review and confirm a potential PV or any other vigilance case, before being injected automatically in SafetyEasy®. With Intake, you can easily track imported and rejected cases.

06

API Connect - seamless data integration

SafetyEasy®'s standard API enables you to work on seamlessly integrated tools: you can leverage it to connect SafetyEasy® to any of your external systems: eCRF, MedInfo, CRM, Business Intelligence tool etc.

07

GALAXY MODULES: OVERVIEW

Business Intelligence - boost compliance

Powerful BI solution using the latest Qlik Sense® technology to help you visualize your data, boost your case analytic capabilities and improve signal detection with advanced dashboards:

- Workflow overview & case distribution
- Case: high level & time exploration
- MedDRA exploration
- Pivot table
- Compliance overview

08

Gateway - integrated file transfer

Make connection to the health authorities easier thanks to SafetyEasy® Inbound and Outbound Gateway. Automatically transfer your vigilance files to and from partners: Health Authorities, your partners' safety systems, or any other systems supporting AS2 transfers (eg. EDCs or others). Mono-directional gateways provide you with an ACK on receipt. For the bi-directional MHRA gateway the agency sends the cases directly logged in into their platform and you can simply send your reports and cases.

09

Central DB Manager - effortless admin

Streamline all your databases management and administration with a complete overview of all your sponsors DB, query of all your databases at once, create users rules.
